Description of work carried out

1	EPM personnel must inform site contact to arrange for permission to carry out work activity and inform the estimated time of arrival.
2	On arrival EPM personnel are to sign in the visitor's book and read the site specific health & safety rules. Before the commencement of any contract works, attendance of a site induction will be required if necessary. If a permit to work is required this will be completed before work commences.
3	Once the appropriate paperwork has been completed and permission has been granted the EPM operative will undertake a full inspection of the premises.
4	A full review of all relevant records and documentation will be made and details collated for analysis. This information will be used to determine existing contractor's findings and current programmes in place to achieve eradication.
5	A detailed inspection will be carried out to all relevant areas to establish if there is a pest infestation. This will involve checking various types of monitors positioned to several high risk areas around the facility. Not all monitoring points shall be inspected. Points will be selected at random. In some cases it may be necessary to inspect inside the workings of process machinery. This may require separate permission, prior arrangement or permits to work and lock-off provision.
6	It may be necessary to gain access to difficult or sensitive areas. Permission must be sought by site management before access is gained into all types of machinery. Management must be informed of our intended task and questions asked as to the safe access of the area. Only once permission has been granted will an inspection take place in such an area. EPM staff should be accompanied in all such cases. Once the inspection of these areas has been completed, site management will be informed of completion of the inspection.
7	If a pest infestation is found a full investigation will be carried out to determine the source of the problem. Any dead rodents or carcass's will be removed from site if found.

8	Photographic evidence may be required to assist in identifying pest issues. This must only be carried out with the permission of the client contract manager.
9	When the inspection has been completed all items and tools are to be collected and removed from site and all areas cleaned, tidied and made safe.
10	Once the inspection and any investigations have been completed the operative will report to a designated area to compile a report. This will then be discussed with the site manager or contact. A signature on a EWS form will be required from the site contact before leaving site.

Accident & Emergency Procedures	
In the event of an accident this must be reported to the site manager/contact. All accidents must be reported in the site accident book. Contact should also be made with the EPM office and accidents reported in the accident book. If first aid can be applied this must be carried out using the first aid equipment stored in the vehicle. If the accident is serious the emergency services need to be contacted via the 999 number. Please ensure H&S Data sheets are available if required.	

Equipment Likely to be used.	
Torch, monitoring station keys, screwdrivers, scrapers, laptop tablet, metal detectable pen, rodent glue boards, (for emergency use only),	

Personal Protective Equipment expected to be used	
Safety Boots, Coveralls, Safety Glasses, Ear protection, hard hat, disposable gloves, Hi-visibility vests. Face mask with appropriate filters.	

Certification Required	
Minimum of a British Pest Control Association Diploma	

EPM Personnel Involved in the task
